List of figures ix
Preface xi
1 Introduction **1**
1.1 Philosophy 1
1.2 Outline 3
2 A quick review of gas dynamics **5**
2.1 Ideal fluid description: ρ, p, **u**, and e 5
2.2 Euler's equations 6
2.3 Lagrangian equations 9
2.4 Moving mesh – ALE 10
2.5 Transport terms: viscosity and heat conduction 12
2.6 Bernoulli's equation and applications 15
2.7 Sound waves 20
2.8 Characteristics and simple waves 24
2.9 Shock waves; Rankine–Hugoniot relations 29
2.10 The Taylor–Sedov blast wave 35
2.11 The shock tube 37
3 Numerical hydrodynamics **41**
3.1 Lagrangian methods 41
3.1.1 Staggered-mesh hydrodynamics for 1-D slab geometry 41
3.1.2 Staggered-mesh hydrodynamics in two dimensions – quadrilateral zones 45
3.1.3 Unstructured meshes 48
3.2 Eulerian methods 49
3.2.1 Finite-difference methods; Lagrangian plus advection 49
3.2.2 Godunov methods; PPM 52
3.2.3 WENO 56
3.2.4 Adaptive mesh refinement (AMR) 59

3.3 ALE methods 61
3.4 3-D methods 62
3.5 Other methods – SPH and spectral methods 63
3.6 Summary 66
4 Description of radiation 69
4.1 Intensity; flux; energy density; stress tensor 69
4.2 The transport equation; absorptivity, emissivity 75
4.3 Radiation moment equations 78
4.4 Diffusion approximation 80
4.5 Coupling terms in Euler's equations 84
5 Steady-state transfer 86
5.1 Formal solution in three dimensions 86
5.2 Time-independent slab geometry 87
5.3 Milne's equation 91
5.4 Eddington factor 94
5.5 Milne's second equation – thermalization 95
5.6 The Feautrier or even-parity equation 98
5.7 Eddington–Barbier relation 99
6 The comoving-frame picture 102
6.1 The Doppler and aberration transformations 103
6.2 Transforming I, k, j 104
6.3 Transforming E, $\mathbf{F}$, and 107
6.4 The comoving-frame transport equation 110
6.5 A common-sense summary 114
6.6 The comoving-frame equation as a boundary-value problem 114
6.7 Diffusion in the comoving frame 117
6.8 Sobolev approximation 122
6.9 Expansion opacity 130
6.9.1 The Karp *et al.* model 130
6.9.2 Friend and Castor model 132
6.9.3 Eastman and Pinto model; Wehrse, Baschek, and von Waldenfels model 133
6.9.4 Expansion opacity example: the iron spectrum 135
7 Hydrodynamics with radiation: waves and stability 138
7.1 Imprisoned equilibrium radiation 138
7.2 Nonadiabatic waves 139
7.3 Atmospheric oscillations with radiation pressure 141
8 Radiation–matter interactions 152
8.1 QED for dummies 152
8.2 Emission and absorption; Einstein coefficients 154

8.3 Scattering 158
8.4 Photoionization and recombination 163
8.5 Free–free absorption – bremsstrahlung 168
8.6 Opacity calculations 172
9 Spectral line transport 179
9.1 Non-LTE 179
9.1.1 Kinetic equations 179
9.1.2 Two-level atom 181
9.1.3 Ivanov's approximation 188
9.1.4 Multilevel atom 188
9.2 Partial redistribution 194
9.2.1 Asymptotic resonance line transfer with R_{II} 199
9.3 Mean number of scatterings; mean path length 201
9.3.1 Irons's theorem 204
9.4 Time-dependent line transport 205
10 Refraction and polarized light 212
10.1 Refraction 212
10.2 Description of polarized light 218
10.3 Transport equation for an isotropic medium 223
10.4 Polarized light in an anisotropic medium 225
11 Numerical techniques for radiation transport 236
11.1 Splitting hydrodynamics and radiation 236
11.2 Thermal diffusion 240
11.3 Eddington approximation 242
11.4 Diffusion solvers 245
11.4.1 Jacobi, Gauss–Seidel, and successive overrelaxation (SOR) methods 246
11.4.2 Alternating-direction implicit (ADI) method 248
11.4.3 Krylov methods in general 249
11.4.4 CG method 249
11.4.5 GMRES, ORTHOMIN, Ng, BCG, and Chebyshev methods 250
11.4.6 Multigrid method 253
11.4.7 Preconditioning 255
11.4.8 Nonlinear systems; Newton–Krylov method 258
11.5 Eddington factors and flux limiters 260
11.6 Method of discrete ordinates 266
11.7 Spherical symmetry 268
11.8 Escape probability methods 272
11.9 S_N methods 274

11.10 What are the angles? The bad news 283
11.11 Implicit solutions – acceleration 286
11.12 Monte Carlo methods 291
12 Examples **294**
12.1 Marshak wave and evaporation fronts 294
12.2 Ionization fronts 304
12.3 Comptonization 308
12.4 Radiating shock waves 319
12.5 Radiatively driven stellar winds 327
