

Figures

2.1	Dispersion relation for sound waves with cooling	page 23
2.2	Structure of a centered rarefaction wave	29
2.3	Structure of a Taylor–Sedov blast wave	37
2.4	Shock tube structure	39
3.1	Solution of a Riemann problem	53
4.1	Definition of intensity	71
4.2	Radiative boundary layers	82
5.1	Hopf function q and Eddington factor for Milne problem	94
5.2	Infinite-medium resolvent function	96
6.1	Characteristics for comoving-frame transport	116
6.2	Iron spectrum expansion opacity	136
7.1	Power plot for condition (b)	146
7.2	Stability domain	151
8.1	Klein–Nishina cross section	161
8.2	OPAL opacity for iron	177
9.1	Two-level atom NLTE source function	187
9.2	Redistribution function R_I	197
9.3	Marginal distribution function for R_{II}	198
9.4	Asymptotic $\tilde{J}(\tau)$ for PRD	201
10.1	Stokes profiles	234
11.1	p, z coordinates for spherical transfer	271
12.1	Marshak wave temperature profiles	297
12.2	Marshak wave flux profiles	298
12.3	Marshak wave streaming function, F/cE	299
12.4	Structure of evaporation flow	302
12.5	Structure of evaporation flow – detail	302
12.6	Ionization front diagnostic diagram	306
12.7	Comptonized spectra – transform space	317
12.8	Comptonized spectra – time domain	317
12.9	Spectra for inverse Compton reflection	319
12.10	Flux–temperature diagrams for radiating shocks	321
12.11	Structure of a supercritical radiating shock	325
